Lab Program: Week 1

1. Design the website to display the Timetable of the Class.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Class Timetable</title>
<style>
    body {
        font-family: Arial, sans-serif;
        margin: 20px;
    }
    .timetable-container {
        border: 2px solid black;
        padding: 10px;
        max-width: 1100px;
        margin: auto;
    }
    .college-header {
        text-align: center;
    }
    .college-header h1 {
        font-size: 18px;
        margin: 2px;
    }
    .college-header p {
        margin: 2px;
        font-size: 13px;
    }
    .college-header h2 {
        font-size: 15px;
        margin: 4px;
        text-decoration: underline;
    }
    .college-header h3 {
        font-size: 14px;
        margin: 2px;
        text-decoration: underline;
    }
    .meta-row {
        display: flex;
        justify-content: space-between;
        font-size: 13px;
        margin: 5px 0;
    }
    table {
        border-collapse: collapse;
        width: 100%;
        margin-top: 5px;
```

```
    }
    table, th, td {
        border: 1px solid black;
    }
    th, td {
        padding: 6px;
        text-align: center;
        font-size: 12px;
    }
    .day-col {
        font-weight: bold;
        width: 60px;
    }
    .lunch-col {
        writing-mode: vertical-rl;
        text-transform: uppercase;
        font-weight: bold;
    }
    .legend-table td {
        text-align: left;
        font-size: 11px;
        vertical-align: top;
    }
    .coordinator {
        font-size: 12px;
        margin-top: 8px;
    }
    .signatures {
        display: flex;
        justify-content: space-between;
        margin-top: 20px;
        font-size: 12px;
        font-weight: bold;
        text-align: center;
    }
    .signatures div {
        flex: 1;
    }
</style>
</head>
<body>

<div class="timetable-container">

    <div class="college-header">

Prelab Programs: Week 2

1. Design a form to capture the options for open Elective courses.

Code:

```
<!doctype html>
<html>
  <head>
    <title>Open Elective Course Selection</title>
  </head>
  <body>
    <h2>Open Elective Course Selection</h2>

    <form>
      <label for="name">Student Name:</label>
      <input type="text" id="name" name="name" />
      <br /><br />

      <label for="roll">Roll Number:</label>
      <input type="text" id="roll" name="roll" />
      <br /><br />

      <label for="branch">Branch:</label>
      <select id="branch" name="branch">
        <option>CSE</option>
        <option>ECE</option>
        <option>EEE</option>
        <option>ME</option>
        <option>Civil</option>
      </select>
      <br /><br />

      <label>Choose Open Elective:</label>
      <br />
      <input type="radio" name="elective" value="ai" /> Artificial Intelligence
      <br />
      <input type="radio" name="elective" value="cloud" /> Cloud Computing
      <br />
      <input type="radio" name="elective" value="cyber" /> Cyber Security
      <br />
      <input type="radio" name="elective" value="iot" /> Internet of Things
      <br /><br />

      <label for="semester">Semester:</label>
      <select id="semester" name="semester">
        <option>III</option>
        <option>IV</option>
        <option>V</option>
        <option>VI</option>
      </select>
      <br /><br />

      <input type="submit" value="Submit" />
```

```
      <input type="reset" value="Reset" />
    </form>
  </body>
</html>
```

Output:

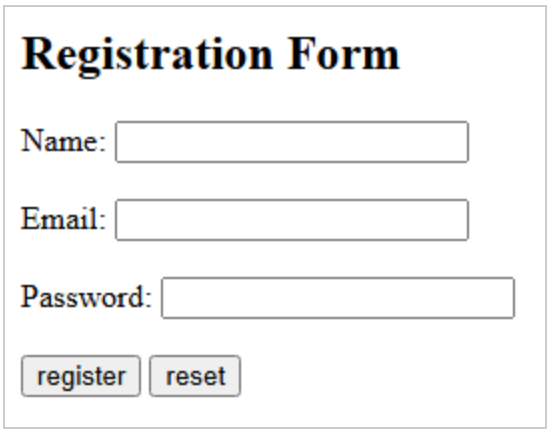

2. Create a registration form to capture email id along with username and password.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Registration Form</title>
</head>
<body>
    <h2>Registration Form</h2>
    <form action="">
        <label for="username">Name:</label>
        <input type="text" id="username" name="username"/>
        <br><br>
        <label for="email">Email:</label>
        <input type="email" name="email" id="email">
        <br><br>
        <label for="password">Password:</label>
        <input type="password" id="password" name="password">
        <br><br>
        <input type="submit" value="register">
        <input type="reset" value="reset">

    </form>
</body>
</html>
```

Output:

Lab Program: Week 2

1. Create a form to capture Personal Information on one page and Educational Qualifications on another page.

Page 1 – personal.html

Code:

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>Document</title>
  </head>
  <body>
    <form action="educational.html" method="get">
      <label>Full Name:</label>
      <input type="text" name="name" />
      <br /><br />

      <label>Date of Birth:</label>
      <input type="date" name="dob" />
      <br /><br />

      <label>Gender:</label>
      <input type="radio" name="gender" value="male" /> Male
      <input type="radio" name="gender" value="female" /> Female
      <input type="radio" name="gender" value="other" /> Other
      <br /><br />

      <label>Email:</label>
      <input type="email" name="email" />
      <br /><br />

      <label>Phone Number:</label>
      <input type="tel" name="phone" />
      <br /><br />

      <label>Address:</label>
      <br />
      <textarea name="address" rows="4" cols="30"></textarea>
      <br /><br />

      <label>City:</label>
      <input type="text" name="city" />
      <br /><br />
```

```
      <label>State:</label>
      <input type="text" name="state" />
      <br /><br />

      <input type="submit" value="Next" />
    </form>
  </body>
</html>
```

Output:

Prelab Programs: Week 3

1. Write CSS code to change the background color of the page to light green color, display the list with a circle and apply a margin of 10 on all sides with border on top and bottom.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Trying CSS</title>
    <style>
        body{
            background-color: lightgreen;
        }
        ul{
            border-top: 2px solid black;
            border-bottom: 2px solid black;
            margin: 10px;
            list-style-type: circle;
        }
    </style>
</head>
<body>
    <h>Courses</h2>
    <ul>
        <li>Web Dev</li>
        <li>Internet of Things</li>
        <li>Artifical Intelligence</li>
        <li>Machine Learning</li>
    </ul>
</body>
</html>
```

Output:

2. Write external CSS code to apply styles to a tab with max-width: 700px.

2.html

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Max width property</title>
    <link rel="stylesheet" href="2.css">
</head>
<body>
    <div class="tab">
        <p>Demonstrating max width concept</p>
    </div>
</body>
</html>
```

2.css

Code:

```
.tab{
    margin: 10px auto;
    border: 2px solid black;
    padding: 5px;
    background-color:lightblue;
    max-width: 700px;
}
```

Output:

Lab Programs: Week 3

1. Develop a college website using HTML5 semantic tags to display the college header, navigation menu, departments, latest news and footer.

Code:

```
<!DOCTYPE html>
<html>
<head>
    <title>Vasavi College of Engineering</title>

    <style>
        body {
            margin: 0;
            font-family: Arial, sans-serif;
            background-color: #f2f6f8;
        }

        /* Header */
        header {
            background-color: white;
            padding: 20px 10%;
            display: flex;
            align-items: center;
            gap: 30px;
        }

        header img {
            width: 130px;
        }

        header h1 {
            color: #064b6b;
            margin: 0;
        }

        header p {
            margin: 8px 0;
        }

        /* Navigation */
        nav {
            background-color: #d5dde3;
            padding: 15px;

About Me

I am 3rd year BTech Computer Science student studying at Vasavi College of Engineering. Interested in exploring new technologies like Artifical Intelligence and Machine Learning. Building intelligent and useful web applications that help solve problems.

Personal Information

Name	Anjana
Date of Birth	07-07-2007
Gender	Female
Nationality	Indian
Languages	English, Telugu, Hindi

Educational Qualifications

Qualification	Institution	Year	CGPA / Percentage
B.Tech CSE	Vasavi College of Engineering	2028	9.77 CGPA
Intermediate	Turito Junior College	2024	98%
10th Class	Santinos Global School	2022	93%

Skills

- HTML, CSS, JS
- Python, C, Java
- SQL
- Computer Networks

Projects

Metrik-CNC Tool Wear Prediction and scrap risk analysis

A website which predicts tool wear early and calculates RUL (remaining useful life) based on the training data .

Market AI Suite

An AI-powered marketing assistant for generating marketing ideas.

Hobbies and Interests

- Coding
- Sports
- Art

@2026 Anjana Bandam

Email: anjanabandam@gmail.com

Prelab Programs: Week 4

1. Write JS code to generate the Fibonacci series up to n terms.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Fibonacci Series</title>
</head>
<body>
    <script>
        let first=0;
        let second=1;
        let n=10;
        document.write("Fionacci Series:  0\n")
        for(let i=1;i<=n;i++){
            let third=first+second
            document.write(third +"  ")

            first=second
            second=third
        }
    </script>
</body>
</html>
```

Output:

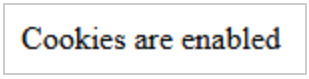

Fionacci Series: 0 1 2 3 5 8 13 21 34 55 89

2. Write JS code to detect whether cookies are enabled in the browser.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Cookies enabled or not</title>
</head>
<body>
    <script>
        if ( navigator.cookieEnabled){
            document.write("Cookies are enabled")
        }
        else{
            document.write("Cookies are not enabled")
        }
    </script>
</body>
</html>
```

Output:

3. Write JavaScript code to validate a password that starts with an uppercase letter, contains at least one digit, and is at least 8 characters long.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Password Validation</title>
</head>
<body>
    <script>
        let password=prompt("enter your password")
        let pattern=/^[A-Z](?=.*\d).{7,}/
        if (pattern.test(password)){
            document.write("Password is ok")
        }
        else{
            document.write("Password rejected")
        }
    </script>
</body>
</html>
```

Output:

Password is ok

4. Write JS code using an arrow function and template literals to display a list of student names.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Display list of student names</title>
</head>
<body>
    <script>
         const display=(...a)=>{
            document.write(`Student names:<br>`)
            for(i in a){
                document.write(`${a[i]}<br>`)
            }
         }

         display("Joe","Max","Stacy","Gwen","Peter")
    </script>
</body>
</html>
```

Output:

Student names:
Joe
Max
Stacy
Gwen
Peter

Lab Programs: Week 4

1. Write the JavaScript Code to generate a multiplication table.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Multiplication Table</title>
</head>
<body>
    <script>
        let n=prompt("enter n:")
        for(let i=1;i<=10;i++){
            document.write(`${n}x${i}=${n*i}<br>`)
        }
    </script>
</body>
</html>
```

Output:

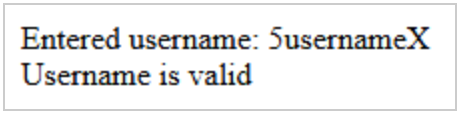

5x1=5
5x2=10
5x3=15
5x4=20
5x5=25
5x6=30
5x7=35
5x8=40
5x9=45
5x10=50

2. Write JavaScript code to validate a 10-character username that starts with a digit and ends with an alphabet.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Validate username</title>
</head>
<body>
    <script>
        let username=prompt("enter your username:")
        let pattern=/^\d[A-Za-z]{8}[A-Za-z]$/
        if (pattern.test(username)){
            document.write("Username is valid")
        }
        else{
            document.write("Username is invalid")
        }
    </script>
</body>
</html>
```

Output:

3. Write JavaScript code to move an image in the direction selected by the user using Left, Right, Up, and Down buttons.

Code:

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>Image Moving using buttons</title>
    <style>
      .buttons {
        display: flex;
        margin: auto;
        justify-content: center;
      }
      body {
        margin: 20px;
        padding: 30px;
      }
      img {
        position: absolute;
        left: 150px;
        top: 150px;
      }
    </style>
  </head>
  <body>
    <img
      class="image"
      src="https://png.pngtree.com/png-vector/20220121/ourmid/pngtree-3d-tennis-ball-vector-ilustration-
png-image_4331248.png"
      alt="tennisball"
      width="150px"
      height="150px"
    />
    <br /><br /><br /><br /><br />
    <div class="buttons">
      <button onclick="moveLeft()">Left</button>
      <button onclick="moveRight()">Right</button>
      <button onclick="moveDown()">Down</button>
      <button onclick="moveUp()">Up</button>
    </div>
    <script>
      let img = document.querySelector(".image");
      let x = 150;
      let y = 150;
      function moveLeft() {
        x = x - 10;
        img.style.left = x + "px";
      }
      function moveRight() {
        x = x + 10;
        img.style.left = x + "px";
      }
      function moveUp() {
        y = y - 10;
        img.style.top = y + "px";
```

```
      }
      function moveDown() {
        y = y + 10;
        img.style.top = y + "px";
      }
    </script>
  </body>
</html>
```

Output:

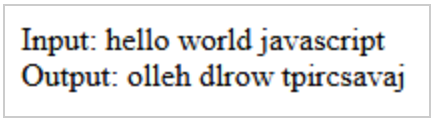

4. Write a JavaScript function that accepts a string as a parameter and reverses each word in the string.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Reverse a string</title>
</head>
<body>
    <script>
        let word=prompt("enter something: ")
        document.write(word.split(" ").map(word=>word.split("").reverse().join("")).join(" "))
    </script>
</body>
</html>
```

Output:

5. Write a JavaScript function that takes an array of numbers and finds the second smallest and second largest numbers.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Find second smallest and second largest</title>
</head>
<body>
    <script>
        let n=[3,1,5,7,8]
       document.write(n+"<br>")

        function secondLargest(arr){
            let max=arr[0];

            for(let i=1;i<arr.length;i++){
                if(arr[i]>max) max=arr[i]
            }
            let second=arr[0]
            for(let i=1;i<arr.length;i++){
                if(arr[i]<max && arr[i]>second) second=arr[i]
            }
            document.write(`Second largest: ${second}`)
        }
        function secondSmallest(arr){
            let max=arr[0];

            for(let i=1;i<arr.length;i++){
                if(arr[i]<max) max=arr[i]
            }
            let second=arr[0]
            for(let i=1;i<arr.length;i++){
                if(arr[i]>max && arr[i]<second) second=arr[i]
            }
            document.write(`Second smallest: ${second}`)
        }
         secondLargest(n)
         document.write("<br>")
        secondSmallest(n)
    </script>
</body>
</html>
```

Output:

3,1,5,7,8
Second largest: 7
Second smallest: 3

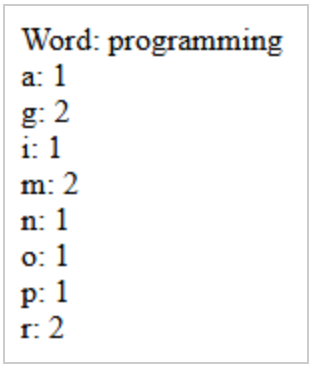

6. Write a JavaScript program that takes a word as input and finds the number of occurrences of each letter in the given String.

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Frequency of each character in a word</title>
</head>
<body>
    <script>
        let word=prompt("enter a word")
        let freq=new Array(26).fill(0)

        for(let i=0;i<word.length;i++){
            let index=word[i].charCodeAt(0)-'a'.charCodeAt(0)
            freq[index]++;
        }
        for(let i=0;i<26;i++){
            if(freq[i]>0){
                document.write(`${String.fromCharCode(i+97)}: ${freq[i]}<br>`)
            }
        }
    </script>
</body>
</html>
```

Output:

7. Write a JavaScript function that generates all possible substrings of a given string.

Code:

```
<!DOCTYPE html>
<html>
<head>
    <title>All Substrings</title>
</head>
<body>

<script>
    function substrings(str) {
        for (let i = 0; i < str.length; i++) {
            for (let j = i + 1; j <= str.length; j++) {
                document.write(`${str.substring(i, j)}, `);
            }
        }
    }

    let word = prompt("enter a word: ")

    substrings(word);
</script>

</body>
</html>
```

Output:

Word: hello
h, he, hel, hell, hello, e, el, ell, ello, l, ll, llo, l, lo, o,

8. Write a JavaScript function to find the first not repeated character.

Code:

```
<!DOCTYPE html>
<html>
<head>
    <title>First Non-Repeated Character</title>
</head>
<body>

<script>
    function firstNonRepeated(str) {
        let freq = {};

        for (let ch of str) {
            freq[ch] = (freq[ch] || 0) + 1;
        }

        for (let ch of str) {
            if (freq[ch] == 1) {
                return ch;
            }
        }
    }

    let str = prompt("enter a word: ")

    document.write(`First non-repeated character: ${firstNonRepeated(str)}`);
</script>

</body>
</html>
```

Output:

9. Write a JavaScript program to check the strength of a given password and display whether it is a Strong Password or not.

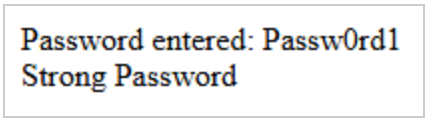

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Password Strength</title>
</head>
<body>
    <script>
    let password = prompt("Enter your password");

    let pattern = /^(?=.*[A-Z])(?=.*\d).{8,}$/;

    if (pattern.test(password)) {
        document.write(`Strong Password`);
    }
    else {
        document.write(`Not a Strong Password`);
    }
</script>
</body>
</html>
```

Output:

10. Write a JavaScript program to remove duplicate characters from a given string.

Code:

```
<!DOCTYPE html>
<html>
<head>
    <title>Remove Duplicate Characters</title>
</head>
<body>

<script>
    let str = prompt("Enter a string");
    let result = "";

    for (let ch of str) {
        if (!result.includes(ch)) {
            result += ch;
        }
    }

    document.write(`Result: ${result}`);
</script>

</body>
</html>
```

Output:
